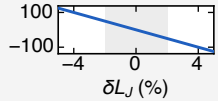
Optional: ageing

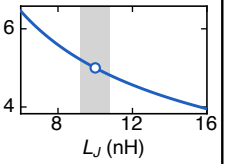
Junctions drift after fabrication.



You use: re-probe

1 Calibrate the junction

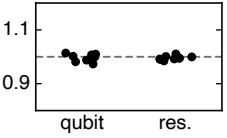
Fit L_J to the measured f_{01} and keep both values.



You use: probe station · VNA

2 Compare frequencies

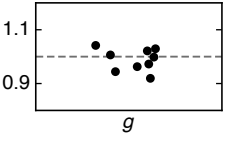
Qubit and resonator should agree within a few per cent.



You use: spectroscopy

3 Test the couplings

Fit g from the avoided crossing, not from χ.



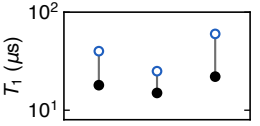
You use: flux sweep · EM solver

Optional: hybrid solve

Resolve the edge fields for surface losses.

4 Test the lifetimes

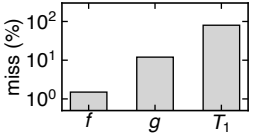
Set T_1 against a dielectric plus Purcell budget.



You use: T_1 decay

5 Rank the misses

Order the quantities by how far the model missed.



You use: statistics

6 Report

State every convention and the inputs you assumed.

You use: paper draft
